

Leading in Supply Stop Technology Breakthroughs

Since 1988, ACCOR[®] Technology, Inc. has been manufacturing plumbing valves that have revolutionized the industry.

Our Mission:

To design and manufacture American-made, innovative, health-safe plumbing valves that are the easiest to install, most reliable and most cost-effective for the plumbing trade.

Our Brands:

FlowTite[®] 4ALL[®]—wholesale, new construction
FlowTite[®] R-SERIES[®]—wholesale, repair/replacement
PUSHON[®] PEX—mro distributors, new construction
PUSHON[®] R-SERIES[®]—mro distributors, repair/replacement

ACCOR is the complete solution

With its two distinct core designs, ACCOR has a superior angle stop valve system built for new pipe installations and replacement connecting needs.

More than 2.7 Million Valves Installed Since 1988

Our Products:

- Require no tools for installation or removal;
- Were created lead-free from inception, providing the advantage of more than 25 years of in-field experience—while the new, lead-free mandate forced other manufacturers to convert to new and unproven, less-malleable alloy designs;
- Include the ACCOR[®] one-piece design of factory-attached, flexible connectors that eliminate joint leaks;
- Come in three designer finishes: Clean White, Brushed Chrome and Oil-Rubbed Bronze;
- Are backed by the industry's only 10-year warranty that includes product defects and associated labor costs;
- Are proudly made in the USA at a state-of-the-art facility that utilizes a superior, robotics-controlled quality-control process;
- Have received the endorsement of leaders in the construction and plumbing industry and have been installed in more than 2.7 million new homes.

Only Valve with Two Gripper Rings and Twist-Off Removal

Patented PUSHON[®] Technology:

- Incorporates stainless-steel gripper rings and EPDM rubber seals, and the ability to easily push onto copper, CPVC or PEX piping systems;
- Is the only one in the industry to provide an increased margin of safety through a patented design of two gripper rings for double pipe contact and a twist-off removal system that ensures no accidental early release;
- Resolves the problems of updating copper and CPVC plumbing from the '50s and beyond;
- Eliminates soldering fire hazards, permanent pipe damage, packing seal leaks and installation problems.
